It is time to get back to taking care of all of you!

Getting regular screening for breast, cervical, and colorectal (colon) cancers helps find cancer early, when treatment is likely to work best and be easier for you.

Cancer screening saves lives!

It is best to detect cancer at an early stage when treatment is easier and more effective.

**Breast:** Breast cancer screening means checking breasts for cancer before there are signs or symptoms of the disease. Mammograms are essential.

**Cervix:** One sample is all that is needed for two key tests for cervical health. The Pap test can find abnormal cells in the cervix which may turn into cancer. The HPV test looks for the virus (human papillomavirus) that can cause cell changes that may lead to cervical cancer.

**Colon:** Colonoscopy can find and remove precancerous polyps (abnormal growths) in the colon or rectum before they turn into cancer.

**Get the recommended cancer screening tests. Screening can save your life!**

**Talk to your healthcare provider about the best screening options for you.** To find one in your area call **1-866-783-2645**. For information on cancer screening visit: **<https://bit.ly/3iwPaAH>**
